LAB REPORT on

BIG DATA ANALYTICS (20CS6PEBDA)

Submitted by

POOJA K(1BM19CS111)

in partial fulfillment for the award of the degree of BACHELOR OF ENGINEERING in COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
May-2022 to July-2022

B. M. S. College of Engineering,

Bull Temple Road, Bangalore 560019(Affiliated To Visvesvaraya Technological University, Belgaum)

Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled "BIG DATA ANALYTICS" carried out by POOJAK(1BM19CS111), who is bonafide student of B. M. S. College of Engineering. It is in partial fulfillment for the award of Bachelor of Engineering in Computer Science and Engineering of the Visvesvaraya Technological University, Belgaum during the year 2022. The Lab report has been approved as it satisfies the academic requirements in respect of aBig Data Analytics - (20CS6PEBDA)work prescribed for the said degree.

Antara Roy Choudhury Assistant Professor

Department of CSE BMSCE, Bengaluru

Dr. Jyothi S NayakProfessor and Head
Department of CSE
BMSCE, Bengaluru

Index Sheet

SI.	Experiment Title	Page No.
No.		
1.	Mongo CRUD Demonstration	
2.	Cassandra Employee Keyspace	
3.	Casssandra Library Keyspace	

Course Outcome

CO1	Apply the concept of NoSQL, Hadoop or Spark for a given task
CO2	Analyze the Big Data and obtain insight using data analytics mechanisms.
CO3	Design and implement Big data applications by applying NoSQL, Hadoop or Spark

LAB-2

```
Perform the following DB operations using Cassandra.
```

Create a keyspace by name Employee create keyspace employee with replication = {
 ... 'class':'SimpleStrategy',
 ... 'replication_factor':1};
 cqlsh> use employee;

2. Create a column family by name Employee-Info with attributes Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining, Salary, Dept_Name

create table employee_info(emp_id int, emp_name text, designation text, date_of_joining timestamp, salary double, dept_name text, PRIMARY KEY(emp_id));

3. Insert the values into the table in batch

```
begin batch insert into
employee_info(emp_id,emp_name,designation,date_of_joining,salary,dept_name)
values (1,'Prema','CEO','2022-06-23',70000,'Overall') insert into
employee_info(emp_id,emp_name,designation,date_of_joining,salary,dept_name)
values (12,'Sahana','CTO','2022-06-25',50000,'Developer') insert into employee_info(e
mp_id,emp_name,designation,date_of_joining,salary,dept_name) values
(121,'Pratiksha','ABC','2022-06-25',80000,'Developer') insert into
employee_info(emp_id,emp_name,designa
tion,date_of_joining,salary,dept_name)values (112,'Pooja','CTO','2022-06-
25',50000,'Developer') apply batch;
cqlsh:employee> select * from employee_info;
```

4. Update Employee name and Department of Emp-Id 121

```
cqlsh:employee> update employee_info
            ... set emp name = 'Jayshree', dept name='Sales'
            ... where emp_id=112;
cqlsh:employee> select * from employee_info;
  p_id | date_of_joining
                                              Overall
                                                                   CEO

                                                                                        50000
                                                                   сто
                                                                             Sahana
```

5. Sort the details of Employee records based on salary

- 6. Alter the schema of the table Employee_Info to add a column Projects which stores a set of Projects done by the corresponding Employee. alter table employee_info add project_names set<text>;
- 7. Update the altered table to add project names.

```
:employee> update employee_info set project_names = project_names + {'Project1','p2'} where emp_id =1;
cqlsh:employee> select * from employee_info;
 emp_id | date_of_joining
                                                                                                Prema | {'Project1', 'p2'}

                                                                                                                   { 'm1',
                                                                                               Sahana
```

8. Create a TTL of 15 seconds to display the values of Employee

LAB-3

- 3. Perform the following DB operations using Cassandra.
- 1. Create a keyspace by name Library

```
CREATE KEYSPACE LIBRARY1 WITH REPLICATION = {
    ... 'class':'SimpleStrategy',
    ... 'replication_factor':1};
```

2. Create a column family by name Library-Info with attributes Stud_Id Primary Key, Counter_value of type Counter, Stud_Name, Book-Name, Book-Id, Date_of_issue

```
create table library_info( stud_id int, counter_value counter, stud_name text, book_name text, book_id int, date_of_issue timestamp,PRIMARY KEY(stud_id,stud_name,book_name,book_id,date_of_issue));
```

3. Insert the values into the table in batch

```
update library_info
```

```
... set counter_value = counter_value +1 where stud_id=121 and stud_name='Prema' and book_name='cns' and book_id=113 and date_of_issue='2022-06-29'; select * from library_info;
```

4. Display the details of the table created and increase the value of the counter

```
update library_info set counter_value = counter_value +1 where stud_id=121 and stud_name='Prema' and book_name='cns' and book_id=113 and date_of_issue='2022-06-29'; cqlsh:library1> select * from library info;
```

```
stud id | stud name | book name | book id | date of issue
counter value
2
  121 | Prema | cns | 113 | 2022-06-28 18:30:00.000000+0000 |
5. Write a query to show that a student with id 112 has taken a book "BDA" 2 times
cqlsh:library1> update library info set counter value = counter value +2 where
stud id=111 and stud name='Pooja' and book name='bda' and book id=112 and
date_of_issue='202
2-06-29';
select * from library info;
 stud id | stud name | book name | book id | date of issue
counter value
Pooja | bda | 112 | 2022-06-28 18:30:00.000000+0000 |
                                                                     2
   111 |
   121 |
         Prema | cns | 113 | 2022-06-28 18:30:00.000000+0000 |
                                                                     2
6. Export the created column to a csv file
COPY
library info(stud id,counter value,stud name,book name,book id,date of issue)
TO 'lib1.csv'
     ...;
Using 7 child processes
Starting copy of library 1.library info with columns [stud id, counter value,
stud_name, book_name, book_id, date_of_issue].
Processed: 2 rows; Rate: 17 rows/s; Avg. rate:
                                            17 rows/s
2 rows exported to 1 files in 0.143 seconds.
7. Import a given csv dataset from local file system into Cassandra column family
TRUNCATE library info;
cqlsh:library1> select * from library info;
```

stud id | stud name | book name | book_id | date_of_issue | counter_value

-----+----+-----

```
(0 rows)
```

cqlsh:library1> COPY

 $library_info(stud_id,counter_value,stud_name,book_name,book_id,date_of_issue)$

FROM 'lib1.csv';

Using 7 child processes

Starting copy of library1.library_info with columns [stud_id, counter_value, stud_name, book_name, book_id, date_of_issue].

Processed: 2 rows; Rate: 4 rows/s; Avg. rate: 6 rows/s

2 rows imported from 1 files in 0.364 seconds (0 skipped).

cqlsh:library1> select * from library_info;

II.CRUD (CREATE, READ, UPDATE, DELETE) OPERATIONS

- 1. To create a collection by the name "Student". Let us take a look at the collection list prior to the creation of the new collection "Student". db.createCollection("Student"); => sql equivalent CREATE TABLE STUDENT(...);
- 2. To drop a collection by the name "Student". db.Student.drop();
- 3. Create a collection by the name "Students" and store the following data in it. db.Student.insert({_id:1,StudName:"MichelleJacintha",Grade:"VII",Hobbies:& quot;Int ernetS urfing"});
- 4. Insert the document for "AryanDavid" in to the Students collection only if it does not already exist in the collection. However, if it is already present in the collection, then update the document with new values. (Update his Hobbies from "Skating" to "Chess".) Use "Update else insert" (if there is an existing document, it will attempt to update it, if there is no existing document then it will insert it).

db.Student.update({_id:3,StudName:"AryanDavid",Grade:"VII"},{\$set:{Hobbie s:&quo t;Skatin g"}},{upsert:true});

```
Command Prompt-mongo

> show collections
Student
> db.Student.find();
{ "_id" : 1, "StudName" : "MichelleJacintha", "Grade" : "VII", "Hobbies" : "InternetSurfing" }
{ "_id" : 3, "Grade" : "VII", "StudName" : "AryanDavid", "Hobbies" : "Skating" }

>
```

5. FIND METHOD

A.

To search for documents from the "Students" collection based on certain search criteria.

```
db.Student.find({StudName:"Aryan David"});
({cond..},{columns.. column:1, columnname:0})
```

```
> db.Student.find({StudName:"AryanDavid"});
{ "_id" : 3, "Grade" : "VII", "StudName" : "AryanDavid", "Hobbies" : "Skating" }
>
```

B

To display only the StudName and Grade from all the documents of the Students collection. The identifier_id should be suppressed and NOT displayed. db.Student.find({},{StudName:1,Grade:1,_id:0});

```
Command Prompt - mongo
> db.Student.find({},{StudName:1,Grade:1,_id:0});
{ "StudName" : "MichelleJacintha", "Grade" : "VII" }
{ "Grade" : "VII", "StudName" : "AryanDavid" }
}
```

C.

To find those documents where the Grade is set to 'VII' db.Student.find({Grade:{\$eq:'VII'}}).pretty();

```
Command Prompt - mongo

> db.Student.find({Grade:{$eq:'VII'}}).pretty();

{
        "_id" : 1,
        "StudName" : "MichelleJacintha",
        "Grade" : "VII",
        "Hobbies" : "InternetSurfing"

}

{
        "_id" : 3,
        "Grade" : "VII",
        "StudName" : "AryanDavid",
        "Hobbies" : "Skating"

}

}
```

D.

To find those documents from the Students collection where the Hobbies is set to either 'Chess' or is set to 'Skating'. db.Student.find({Hobbies:{\$in: ['Chess','Skating']}}).pretty();

```
Command Prompt - mongo

> db.Student.find({Hobbies:{$in: ['Chess','Skating']}}).pretty();

{
    "_id" : 3,
    "Grade" : "VII",
    "StudName" : "AryanDavid",
    "Hobbies" : "Skating"
}
}
```

E.

To find documents from the Students collection where the StudName begins with "M". db.Student.find({StudName:/^M/}).pretty();

G.

To find the number of documents in the Students collection. db.Student.count();

```
ox Command Prompt - mongo

> db.Student.count();
2

>
```

Н.

To sort the documents from the Students collection in the descending order of StudName. db.Student.find().sort({StudName:-1}).pretty();

```
Command Prompt- mongo
> db.Student.find().sort({StudNam:-1}).pretty();
{
        "_id" : 1,
        "StudName" : "MichelleJacintha",
        "Grade" : "VII",
        "Hobbies" : "InternetSurfing"
}
{
        "_id" : 3,
        "Grade" : "VII",
        "StudName" : "AryanDavid",
        "Hobbies" : "Skating"
}
```

III. Import data from a CSV file

Given a CSV file "sample.txt" in the D:drive, import the file into the MongoDB collection, "SampleJSON". The collection is in the database "test". mongoimport --db Student --collection airlines --type csv —headerline --file /home/hduser/Desktop/airline.csv

```
C:\Program Files\MongoDB\Server\5.0\bin>mongoimport --db Student --collection airlines --type csv --file "C:\Program Files\MongoDB\airline.csv" --headerline 2022-06-03T08:24:18.366+0530 connected to: mongodb://localhost/2022-06-03T08:24:18.395+0530 6 document(s) imported successfully. 0 document(s) failed to import.

C:\Program Files\MongoDB\Server\5.0\bin>
```

IV. Export data to a CSV file

This command used at the command prompt exports MongoDB JSON documents from

"Customers" collection in the "test" database into a CSV file "Output.txt" in the D:drive.

mongoexport --host localhost --db Student --collection airlines --csv --out /home/hduser/Desktop/output.txt -fields "Year", "Quarter"

V. Save Method:

Save() method will insert a new document, if the document with the _id does not exist. If it exists it will replace the exisiting document.

db.Students.save({StudName:"Vamsi", Grade:"VI"})

```
swittned to db student
> db.Students.save({StudName:"Vamsi",Grade:"VII"})
WriteResult({ "nInserted" : 1 })
> _
```

VI. Add a new field to existing Document:

db.Students.update({ id:4},{\$set:{Location:"Network"}})

```
> db.Students.update({_id:4},{$set:{Location:"Network"}})
WriteResult({ "nMatched" : 0, "nUpserted" : 0, "nModified" : 0 })
> _
```

VII. Remove the field in an existing Document

db.Students.update({ id:4},{\$unset:{Location:"Network"}})

```
ox Command Prompt - mongo
> db.Students.update({_id:4},{$unset:{Location:"Network"}})
WriteResult({ "nMatched" : 0, "nUpserted" : 0, "nModified" : 0 })
>
```

VIII. Finding Document based on search criteria suppressing few fields

db.Student.find({ id:1},{StudName:1,Grade:1, id:0});

To find those documents where the Grade is not set to 'VII'

db.Student.find({Grade:{\$ne:'VII'}}).pretty();

To find documents from the Students collection where the StudName ends with s.

db.Student.find({StudName:/s\$/}).pretty();

```
> db.Student.find({_id:1},{StudName:1,Grade:1,_id:0});
> db.Student.find({Grade:{$ne:'VII'}}).pretty();
> db.Student.find({StudName:/s$/}).pretty();
> db.Student.find({StudName:/s$/}).pretty();
```

IX. to set a particular field value to NULL

```
> db.Students.update({_id:3},{$set:{Location:null}})
WriteResult({ "nMatched" : 0, "nUpserted" : 0, "nModified" : 0 })
>
```

XII. Create a collection by name "food" and add to each document add a "fruits" array db.food.insert({ _id:1,

fruits:['grapes','mango','apple'] })

db.food.insort(= id:2,

To find those documents from the "food" collection where the size of the array is two. db.food.find ({"fruits": {\$size:2}})

```
> db.food.find ( {"fruits": {$size:2}} )
{ "_id" : 3, "fruits" : [ "banana", "mango" ] }
> _
```

To find the document with a particular id and display the first two elements from the array "fruits"

To find all the documets from the food collection which have elements mango and grapes in the array "fruits"

```
db.food.find({fruits:{$all:["mango","grapes"]}})
> db.food.find({fruits:{$all:["mango","grapes"]}})
{ "_id" : 1, "fruits" : [ "grapes", "mango", "apple" ] }
{ "_id" : 2, "fruits" : [ "grapes", "mango", "cherry" ] }
>
```

update on Array: using particular id replace the element present in the 1 st index position of the fruits array with apple db.food.update({_id:3},{\$set:{'fruits.1':'apple'}})

insert new key value pairs in the fruits array

db.food.update({_id:2},{\$push:{price:{grapes:80,mango:200,cherry:100}

```
}
}}

> db.food.update({_id:3},{$set:{'fruits.1':'apple'}})

writeResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 })

> db.food.update({_id:2},{$push:{price:{grapes:80,mango:200,cherry:100}}})

WriteResult({ "nMatched" : 1, "nUpserted" : 0, "nModified" : 1 })

> _
```

XII. Aggregate Function:

```
Create a collection Customers with fields custID, AcctBal, AcctType.

Now group on "custID" and compute the sum of "AccBal". db.Customers.aggregate ( {$group : {_id : "$custID",TotAccBal : {$sum:"$AccBal"} }            }       }); match on AcctType:"S" then group on "CustID" and compute the sum of "AccBal".

db.Customers.aggregate ( {$match: {AcctType:"S"}},{$group : {_id : "$custID",TotAccBal : {$sum:"$AccBal"} }       }       }; match on AcctType:"S" then group on "CustID" and compute the sum of "AccBal" and total balance greater than 1200.

db.Customers.aggregate ( {$match: {AcctType:"S"}},{$group : {_id : "$custID",TotAccBal : {$sum:"$AccBal"} }      }, {$match: {TotAccBal: {$gt:1200}}});
```
